👤 PROFILE

Dynamic and goal-oriented Front End React Developer with a passion for creating innovative applications and driving technological advancements. Committed to delivering high-quality code, enhancing user experiences, and collaborating with cross-functional teams to achieve company objectives. Eager to leverage my skills and dedication to propel the organization forward while continually refining my expertise as a Front End React Developer.

📁 EMPLOYMENT HISTORY

Software Specialist at Haravan, Ho Chi Minh
February 2018 — Present

10/2024 - Present

Project: MASON - POS (React JS)

App Details: A retail POS system for Maison's stores, supporting core sales operations such as product scanning, payment processing (cash, card, QR code), order management, inventory tracking, and revenue reporting. The system also includes features for managing promotions, generating sales receipts, handling refunds, and providing detailed sales analytics to assist in business decision-making.

Development Responsibilities:

- Maintain the app, fix bugs, and add new features.

06/2024 - Present

Project: MAISON - Self-checkout (React JS)

App Details: Self-checkout offers time savings, convenience, improved information security, reduced staff workload, and a modern shopping experience for customers.

Development Responsibilities:

- Project structure setup: designed and implemented the foundational architecture for the project, ensuring scalability and maintainability.
- Contribute ideas, improve technology, and enhance the user experience of the application.
- Managed app data and state using Context API and handled data fetching by Axios
- Developed a styled app using Tailwind CSS.
- Print Integration: Implemented seamless printing solutions, enabling users to print receipts and other necessary documents directly from the system.
- RFID Integration: Replaced traditional bar code scanning with RFID technology, improving product scanning speed and accuracy.
- Monitoring, analysis and reporting app via Sentry.

08/2023 - 10/2023

Project: Loyalty PepsiCo (Zalo Mini App)

App Details: Loyalty application designed exclusively for distributors and agents of Pepsico Foods. Its purpose is to help wholesale users manage information about revenue, reward points, and receive attractive gifts from Pepsico Foods.

Link: <https://zalo.me/s/2285472306095214609>

Development Responsibilities:

- Project structure setup: designed and implemented the foundational architecture for the project, ensuring scalability and maintainability.

- Develop the application using open-source code, API, and documentation from Zalo.
- Managed app data and state using Zustand and handled data fetching by Axios
- Developed a styled app using Tailwind CSS.
- Generate ideas, design, and create experiences based on customer requirements.
- Integrate auto build and auto deploy with CI/CD.

11/2018 - 12/2023 :

Project : Giacmosuaviet, AeonEshop

App details : E-Commerce app (React Native)

Development Responsibilities:

- Migrated source code from React Native CLI to Expo CLI, streamlining development workflows.
- Managed app data and state using API integration, AsyncStorage, Redux, and Redux-Saga.
- Integrated third-party libraries such as Facebook, Google, Code Push, and React-Native-Insider.
- Enhanced app features with Firebase Analytics, React-Native-Insider, and Sentry for tracking and crash reporting.
- Ensured effective communication and user notifications through Firebase and React-Native-Insider.
- Deployed apps using native build tools, ensuring a smooth user experience.

Project : Guardian Vietnam, CoupleTx, On Ways, The Cosmo, Sofia

App details : E-Commerce app (React Native)

Development Responsibilities:

- Project structure setup: designed and implemented the foundational architecture for the project, ensuring scalability and maintainability.
- Led the development and optimization of e-commerce platforms.
- Collaborated with cross-functional teams to deploy tailored e-commerce applications.
- Upgraded applications and transitioned source code from React Native CLI to Expo CLI for enhanced development agility.
- Managed app data and state using fetch API, AsyncStorage, Redux, and Redux Toolkit.
- Applied routing with React Navigation and implemented crash reporting with Sentry.
- Managed notifications through Expo Notifications and built/deployed apps using Expo CLI
- Monitoring, analysis and reporting app via Firebase Analytics, Sentry.
- Integrate auto build and auto deploy with CI/CD.

05/2018 - 10/2018

Project : HaraRetail

App details: Chain Store Management Software

Development Responsibilities:

- Front-end development based on design documentation.
- Supported app testing and collaborated with teammates.
- Upgraded the application according to the Product Owner's specifications.
- Migrated source code from React Native CLI to Expo CLI for improved development efficiency.
- Managed app data and state using API integration, AsyncStorage, Redux, and Redux-Saga.
- Implemented routing with React Navigation and React Native Router Flux.
- Integrated Firebase Analytics for tracking and Sentry for crash reporting.

02/2018 - 04/2018

Internship

- Gained proficiency in JavaScript, ES6, and React Native API
- Learned React Native components, API integration, debugging, and app deployment.
- Studied and implemented efficient source code structures.

Mobile Developer at Freelancer, Ho Chi Minh

October 2023 — Present

10/2023 - Present

Personal Project: Betta Market (React Native)

App Details: Community platform for fish enthusiasts, featuring shop, auction, and online competition functionalities.

Team size: 2

Web: <https://bettamarket.net>

IOS: <https://apps.apple.com/us/app/bettamarket/id6468897251>

Android: <https://play.google.com/store/apps/details?id=bettamarket.net.app>

Development Responsibilities:

- Project structure setup: designed and implemented the foundational architecture of the self-payment system, ensuring scalability and maintainability.
- Built, tested, and deployed the app using React Native CLI.
- Managed app data using API integration, AsyncStorage, and Redux Toolkit.
- Applied third-party libraries like Facebook, Google, and CodePush.
- Implemented routing with React Navigation, tracking with Firebase Analytics, and crash reporting with Sentry and CodePush.
- Managed notifications through Firebase and deployed the app using native build tools.

EDUCATION

NGUYEN TAT THANH UNIVERSITY, Ho Chi Minh

2013 — 2018

Major: Software Engineering

GPA: 2.0/4
